

Bio Stimulants

1.Blooma

Target Crops

- Field Crops: Rice, Wheat, Maize, Cotton
- Horticultural Crops: Tomato, Chilli, Onion, Potato
- Plantation Crops: Tea, Coffee, Sugarcane
- Fruits: Mango, Banana, Grapes, Citrus
- Vegetables: Cabbage, Cauliflower, Okra
- Others: Pulses, Oilseeds, Floriculture crops

Key Benefits

- Enhances nutrient uptake efficiency
- Improves root development
- Boosts photosynthesis activity
- Increases abiotic stress tolerance (drought, salinity, heat)
- Promotes flowering & fruit set
- Improves crop yield and quality

2.Cropsia

Target Crops

- Field Crops: Rice, Wheat, Maize, Cotton
- Vegetables: Tomato, Chilli, Onion, Potato
- Fruits: Mango, Banana, Grapes, Citrus
- Plantation Crops: Tea, Coffee, Sugarcane
- Others: Pulses, Oilseeds, Floriculture crops

Key Benefits

- Enhances nutrient uptake and assimilation
- Stimulates plant metabolism
- Promotes root and shoot development
- Improves plant vigor and growth
- Supports stress tolerance (abiotic stress)
- Improves yield and crop quality

3.EnRhize™

Target Crops

- Field Crops: Rice, Wheat, Maize, Cotton
- Vegetables: Tomato, Chilli, Onion, Potato
- Fruits: Mango, Banana, Grapes, Citrus
- Plantation Crops: Tea, Coffee, Sugarcane
- Others: Pulses, Oilseeds, Floriculture crops

Key Benefits

- Enhances phosphorus and micronutrient uptake
- Improves root colonization and root growth
- Increases water absorption efficiency
- Improves soil health and microbial activity
- Enhances plant tolerance to drought and stress
- Boosts yield and crop quality

4.Envicta™

Target Crops

- Field Crops: Rice, Wheat, Maize, Cotton
- Vegetables: Tomato, Chilli, Onion, Potato
- Fruits: Mango, Banana, Grapes, Citrus
- Plantation Crops: Tea, Coffee, Sugarcane
- Others: Pulses, Oilseeds, Floriculture crops

Key Benefits

- Enhances nutrient uptake and efficiency
- Improves soil structure and nutrient availability
- Stimulates root growth and development
- Boosts plant metabolic activity
- Improves stress tolerance (drought, salinity, heat)
- Enhances flowering, fruit set, and yield
- Improves crop quality and uniformity

5.Orgocare™

Target Crops

Suitable for a wide range of crops:

- Field Crops: Rice, Wheat, Maize, Cotton
- Vegetables: Tomato, Chilli, Onion, Potato
- Fruits: Mango, Banana, Grapes, Citrus
- Plantation Crops: Tea, Coffee, Sugarcane
- Others: Pulses, Oilseeds, Floriculture crops, Nursery crops

Key Benefits

- Reduces excessive transpiration (water loss)
- Protects plants from drought and heat stress
- Improves stomatal regulation
- Minimizes transplant shock
- Enhances plant survival under stress conditions
- Improves overall plant vigor and recovery

6.Zentia

Target Crops

- Field Crops: Rice, Wheat, Maize, Cotton
- Vegetables: Tomato, Chilli, Onion, Potato
- Fruits: Mango, Banana, Grapes, Citrus
- Plantation Crops: Tea, Coffee, Sugarcane
- Others: Pulses, Oilseeds, Floriculture crops

Key Benefits

- Enhances plant growth and vigor
- Improves nutrient uptake and utilization
- Supports root development
- Acts as a natural plant strengthener
- Improves tolerance to abiotic stress
- Contributes to overall crop health and yield

Botanical Pesticides

7. **Admira™ Admon**

Target Crops

- Field Crops: Rice, Cotton, Maize
- Vegetables: Tomato, Chilli, Brinjal, Okra, Cabbage
- Fruits: Mango, Citrus, Grapes, Pomegranate
- Plantation Crops: Tea, Coffee
- Others: Floriculture and horticultural crops

Common Fungal Diseases

Provides supportive control against fungal pathogens:

- Powdery mildew
- Downy mildew (early stage)
- Leaf spot diseases
- Blight (early stage)

Target Pest

- Aphids
- Whiteflies
- Thrips
- Spider mites
- Mealybugs
- Leaf miners (early stages)

8. **Admira™ Adove**

Target Crops

- Field Crops: Rice, Cotton, Maize
- Vegetables: Tomato, Chilli, Brinjal, Okra, Cabbage
- Fruits: Mango, Citrus, Grapes, Pomegranate

- Plantation Crops: Tea, Coffee
- Others: Floriculture and horticultural crops

Target Pest

Effective against common sucking and soft-bodied pests:

- Aphids
- Whiteflies
- Thrips
- Spider mites
- Mealybugs
- Leaf miners (early stages)

9.Admira™ Adrlic

Target Crops

Suitable for a wide range of crops:

- Field Crops: Rice, Cotton, Maize
- Vegetables: Tomato, Chilli, Brinjal, Okra, Cabbage
- Fruits: Mango, Citrus, Grapes, Pomegranate
- Plantation Crops: Tea, Coffee
- Others: Floriculture and horticultural crops

Target Pest

Effective against a wide range of sucking and chewing pests:

- Aphids
- Whiteflies
- Thrips
- Spider mites
- Mealybugs
- Caterpillars (early stages)

- Leaf miners (early stages)

10.Admira™ Adyme

Target Crops

Suitable for a wide range of crops:

- Field Crops: Rice, Wheat, Maize, Cotton
- Vegetables: Tomato, Chilli, Brinjal, Okra, Cabbage
- Fruits: Mango, Citrus, Grapes, Pomegranate
- Plantation Crops: Tea, Coffee
- Others: Floriculture and horticultural crops

Target Pest / Disease

✓ Insect Pests:

- Aphids
- Whiteflies
- Thrips
- Spider mites
- Mealybugs

✓ Fungal & Microbial Diseases:

- Powdery mildew
- Downy mildew
- Leaf spot diseases
- Blight (early stages)
- Damping-off (preventive stage)

11.Ecoza™ Ace

Target Crops

Suitable for a wide range of crops:

- Field Crops: Rice, Cotton, Maize, Pulses
- Vegetables: Tomato, Chilli, Brinjal, Okra, Cabbage
- Fruits: Mango, Citrus, Grapes, Pomegranate
- Plantation Crops: Tea, Coffee, Sugarcane
- **Others:** Oilseeds, Floriculture and horticultural crops

Target Pest

Effective against a wide spectrum of sucking and chewing pests:

- Aphids
- Whiteflies
- Thrips
- Jassids (Leafhoppers)
- Mealybugs
- Caterpillars (Helicoverpa, Spodoptera – early stages)

12.Exoza™ Max

Target Crops

Suitable for a wide range of crops:

- Field Crops: Rice, Cotton, Maize, Pulses
- Vegetables: Tomato, Chilli, Brinjal, Okra, Cabbage
- Fruits: Mango, Citrus, Grapes, Pomegranate
- Plantation Crops: Tea, Coffee, Sugarcane
- Others: Oilseeds, Floriculture and horticultural crops

Target Pest

Effective against a broad spectrum of sucking and chewing pests:

- Aphids
- Whiteflies
- Thrips
- Jassids (Leafhoppers)

- Mealybugs
- Caterpillars (Helicoverpa, Spodoptera – early stages)
- Leaf miners
- Beetles (early stages)

13.Ecoza™ Pro

Target Crops

Suitable for a wide range of crops:

- Field Crops: Rice, Cotton, Maize, Pulses
- Vegetables: Tomato, Chilli, Brinjal, Okra, Cabbage
- Fruits: Mango, Banana, Grapes, Citrus, Pomegranate
- Plantation Crops: Tea, Coffee, Sugarcane
- Others: Oilseeds, Floriculture, Greenhouse and nursery crops

Target Pest

Effective against a broad spectrum of sucking and chewing pests:

- Aphids
- Whiteflies
- Thrips
- Jassids (Leafhoppers)
- Mealybugs
- Caterpillars (Helicoverpa, Spodoptera – early stages)
- Leaf miners
- Mites (early stages)

14.Ecoza™ Rix

Target Crops

- Field Crops: Rice, Cotton, Maize, Pulses
- Vegetables: Tomato, Chilli, Brinjal, Okra, Cabbage
- Fruits: Mango, Banana, Grapes, Citrus, Pomegranate
- Plantation Crops: Tea, Coffee, Sugarcane
- Others: Oilseeds, Floriculture, Greenhouse and Nursery crops

Target Pest

- Effective against a broad spectrum of sucking, chewing pests and mites:
- Aphids
- Whiteflies
- Thrips
- Jassids (Leafhoppers)
- Mealybugs
- Caterpillars (Helicoverpa, Spodoptera – early stages)
- Leaf miners
- Mites (Spider mites)

15.K-Guard™

Target Crops

Suitable for a wide range of crops:

- Field Crops: Rice, Cotton, Maize, Pulses
- Vegetables: Tomato, Chilli, Brinjal, Okra, Cabbage
- Fruits: Mango, Banana, Grapes, Citrus, Pomegranate
- Plantation Crops: Tea, Coffee, Sugarcane
- Others: Oilseeds, Floriculture and horticultural crops

Target Pest

Effective against a broad spectrum of sucking and chewing pests:

- Aphids
- Whiteflies
- Thrips
- Jassids (Leafhoppers)
- Mealybugs
- Caterpillars (Helicoverpa, Spodoptera – early stages)
- Leaf miners

16.K-Rix™

Target Crops

Suitable for a wide range of crops:

- **Field Crops:** Rice, Cotton, Maize, Pulses
- **Vegetables:** Tomato, Chilli, Brinjal, Okra, Cabbage
- **Fruits:** Mango, Banana, Grapes, Citrus, Pomegranate
- **Plantation Crops:** Tea, Coffee, Sugarcane
- **Others:** Oilseeds, Floriculture and horticultural crops

Target Pest

Effective against a broad spectrum of sucking and chewing pests:

- Aphids
- Whiteflies
- Thrips
- Jassids (Leafhoppers)
- Mealybugs
- Caterpillars (Helicoverpa, Spodoptera – early stages)
- Leaf miners

17.Margoshine

Target Crops

Suitable for a wide range of crops:

- Field Crops: Rice, Cotton, Maize, Pulses
- Vegetables: Tomato, Chilli, Brinjal, Okra, Cabbage
- Fruits: Mango, Banana, Grapes, Citrus, Pomegranate
- Plantation Crops: Tea, Coffee, Sugarcane
- Others: Oilseeds, Floriculture, Greenhouse and Nursery crops

Target Pest

Effective against a broad spectrum of sucking and chewing pests:

- Aphids
- Whiteflies
- Thrips
- Jassids (Leafhoppers)
- Mealybugs
- Spider mites
- Caterpillars (early stages)
- Leaf miners

Key Benefits

- Broad-spectrum control of sucking & chewing pests
- Acts as antifeedant, repellent, and growth regulator (IGR)
- Reduces egg laying and pest population build-up
- Safe for beneficial insects when used as recommended
- Suitable for organic farming and IPM programs
- Biodegradable with minimal environmental impact
- Leaves low to no harmful residues on crops
- Helps in resistance management due to multi-mode action

18.Margospin

Target Crops

Suitable for a wide range of crops:

- Field Crops: Rice, Cotton, Maize, Pulses
- Vegetables: Tomato, Chilli, Brinjal, Okra, Cabbage
- Fruits: Mango, Banana, Grapes, Citrus, Pomegranate
- Plantation Crops: Tea, Coffee, Sugarcane
- Others: Oilseeds, Floriculture, Greenhouse and Nursery crops

Target Pest

Effective against both sucking and chewing pests:

- Aphids
- Whiteflies
- Thrips
- Jassids (Leafhoppers)
- Mealybugs
- Caterpillars (Helicoverpa, Spodoptera)
- Leaf miners
- Fruit borers
- Mites (early stages)

Key Benefits

- Dual mode of action: Combines neem-based IGR + spinosad contact/stomach action
- Provides strong control of both sucking and chewing insects
- Faster knockdown effect compared to neem alone
- Reduces resistance development due to multiple active mechanisms
- Effective at low dosage levels
- Suitable for integrated pest management (IPM) programs
- Leaves low residue when used as recommended
- Improves crop protection and yield quality

19.Margo Rix

Target Crops

Suitable for a wide range of crops:

- Field Crops: Rice, Cotton, Maize, Pulses
- Vegetables: Tomato, Chilli, Brinjal, Okra, Cabbage
- Fruits: Mango, Banana, Grapes, Citrus, Pomegranate
- Plantation Crops: Tea, Coffee, Sugarcane
- Others: Oilseeds, Floriculture, Greenhouse and Nursery crops

Target Pest

Effective against a broad spectrum of sucking and chewing pests:

- Aphids

- Whiteflies
- Thrips
- Jassids (Leafhoppers)
- Mealybugs
- Spider mites
- Caterpillars (early stages)
- Leaf miners

Key Benefits

- Provides broad-spectrum pest control
- Acts as antifeedant, repellent, and insect growth regulator (IGR)
- Reduces pest feeding, reproduction, and population buildup
- Water soluble powder ensures easy mixing and uniform spray coverage
- Suitable for organic farming and IPM programs
- Eco-friendly and biodegradable
- Leaves minimal residue on crops
- Helps in resistance management due to multi-mode action

20.Spindura Plus

Target Crops

Suitable for a wide range of crops:

- **Vegetables:** Tomato, Chilli, Brinjal, Cabbage, Cauliflower
- **Fruits:** Grapes, Citrus, Pomegranate
- **Field Crops:** Cotton, Pulses
- **Others:** Floriculture and horticultural crops

Target Pest

Highly effective against chewing pests:

- Caterpillars (Helicoverpa, Spodoptera)
- Fruit borers
- Leaf miners

- Thrips

Key Benefits

- Strong contact and stomach action for quick pest control
- Effective against lepidopteran larvae and thrips
- Provides fast knockdown and long residual activity
- Compatible with IPM programs
- Low toxicity to beneficial insects when used properly
- Suitable for resistance management
- Leaves low residue, ideal for export crops

21.Spindura Pro

Target Crops

Suitable for a wide range of crops:

- **Vegetables:** Tomato, Chilli, Brinjal, Cabbage, Cauliflower
- **Fruits:** Grapes, Citrus, Pomegranate
- **Field Crops:** Cotton, Pulses
- **Others:** Floriculture and horticultural crops

Target Pest

Highly effective against chewing pests and some sucking pests:

- **Caterpillars (Helicoverpa, Spodoptera)**
- **Fruit borers**
- **Leaf miners**
- **Thrips**

Key Benefits

- **Strong contact and stomach action** for effective pest control
- Provides **fast knockdown** and residual activity
- Highly effective against **lepidopteran larvae and thrips**

- Suitable for **IPM programs**
- Helps in **resistance management**
- **Low residue**, suitable for export crops
- Relatively **safe to beneficial insects** when used as recommended

22.Spindura Rix

Target Crops

Suitable for a wide range of crops:

- Vegetables: Tomato, Chilli, Brinjal, Cabbage, Cauliflower
- Fruits: Grapes, Citrus, Pomegranate
- Field Crops: Cotton, Pulses
- Others: Floriculture and horticultural crops

Target Pest

Highly effective against chewing pests and some sucking pests:

- Caterpillars (Helicoverpa, Spodoptera)
- Fruit borers
- Leaf miners
- Thrips

Key Benefits

- Strong contact and stomach action for effective pest control
- Provides fast knockdown and good residual control
- Highly effective against lepidopteran larvae and thrips
- Water soluble powder ensures easy handling and uniform spray
- Suitable for IPM programs
- Helps in resistance management
- Low residue, ideal for export crops

23.WeedX™

Target Crops

Suitable for use in:

- Plantation Crops: Tea, Coffee, Rubber
- Orchards: Mango, Citrus, Banana, Grapes
- Vegetables: Tomato, Chilli, Onion (directed spray)
- Non-Crop Areas: Nurseries, Landscapes, Bunds, Pathways
- Inter-row / Intercrop Areas (avoid direct contact with crop foliage)

Target Weeds

Effective against a wide range of annual weeds:

- Broadleaf weeds
- Grassy weeds (young stage)
- Sedges (early stage)

Key Benefits

- Fast-acting contact herbicide (visible effect within hours)
- Causes rapid cell membrane disruption leading to weed desiccation
- Effective on a broad spectrum of annual weeds
- Non-selective – controls all green vegetation it contacts
- Biodegradable and eco-friendly
- Leaves no harmful soil residues
- Ideal for organic farming and sustainable agriculture
- Suitable for spot application and inter-row weed control

Microbial Fertilizer

24.iGreen K

Target Crops

- Field Crops: Rice, Wheat, Maize, Cotton
- Vegetables: Tomato, Chilli, Onion, Potato
- Fruits: Mango, Banana, Grapes, Citrus
- Plantation Crops: Tea, Coffee, Sugarcane
- Others: Pulses, Oilseeds, Floriculture crops

Key Benefits

- Solubilizes fixed and insoluble potassium in soil
- Enhances potassium availability and uptake
- Improves root growth and plant vigor
- Enhances drought and stress tolerance
- Improves yield, fruit size, and quality
- Supports better nutrient translocation
- Enhances soil microbial activity and fertility

25.iGreen N

Target Crops

- Field Crops: Rice, Wheat, Maize, Cotton
- Pulses: Chickpea, Groundnut, Soybean
- Vegetables: Tomato, Chilli, Onion
- Fruits & Plantation: Banana, Sugarcane, Tea, Coffee
- Others: Oilseeds and horticultural crops

Key Benefits

- Fixes atmospheric nitrogen into plant-available form
- Reduces dependency on chemical nitrogen fertilizers
- Enhances root development and plant vigor
- Improves soil fertility and microbial activity

- Promotes better plant growth and yield
- Enhances nutrient uptake efficiency
- Supports sustainable and eco-friendly agriculture

26.iGreen NPK

Target Crops

- Field Crops: Rice, Wheat, Maize, Cotton
- Vegetables: Tomato, Chilli, Onion, Potato
- Fruits: Mango, Banana, Grapes, Citrus
- Plantation Crops: Tea, Coffee, Sugarcane
- Others: Pulses, Oilseeds, Floriculture crops

Key Benefits

- Fixes atmospheric nitrogen for plant use
- Solubilizes phosphorus and potassium in soil
- Enhances overall nutrient availability (N, P, K)
- Improves root development and plant growth
- Reduces dependency on chemical fertilizers
- Enhances soil fertility and microbial activity
- Improves crop yield and quality
- Supports sustainable and eco-friendly agriculture

27.iGreen P

Target Crops

- Field Crops: Rice, Wheat, Maize, Cotton
- Vegetables: Tomato, Chilli, Onion, Potato
- Fruits: Mango, Banana, Grapes, Citrus
- Plantation Crops: Tea, Coffee, Sugarcane

- Others: Pulses, Oilseeds, Floriculture crops

Key Benefits

- Solubilizes insoluble phosphates in soil
- Enhances phosphorus availability and uptake
- Promotes strong root development
- Improves flowering, fruiting, and crop maturity
- Enhances plant vigor and early growth
- Reduces dependency on chemical phosphorus fertilizers
- Improves soil fertility and microbial activity
- Increases crop yield and quality

28.iGreen S

Target Crops

- Field Crops: Rice, Wheat, Maize, Cotton
- Vegetables: Tomato, Chilli, Onion, Garlic
- Fruits: Mango, Banana, Grapes, Citrus
- Plantation Crops: Tea, Coffee, Sugarcane
- Others: Pulses, Oilseeds, Floriculture crops

Key Benefits

- Converts elemental sulfur into plant-available sulfate form
- Enhances sulfur availability for crops
- Improves nutrient uptake efficiency (especially N & P)
- Helps in soil pH correction (alkaline soils)
- Enhances chlorophyll formation and protein synthesis
- Improves crop yield, oil content, and quality

- Boosts soil microbial activity and fertility
- Supports sustainable nutrient management

29.Green Shield

Target Crops

- Field Crops: Rice, Wheat, Maize, Cotton
- Vegetables: Tomato, Chilli, Onion, Potato
- Fruits: Mango, Banana, Grapes, Citrus
- Plantation Crops: Tea, Coffee, Sugarcane
- Others: Pulses, Oilseeds, Floriculture crops

Key Benefits

- Solubilizes fixed zinc in soil and makes it plant-available
- Enhances micronutrient uptake (especially Zn)
- Promotes root growth and plant vigor
- Improves enzyme activity and plant metabolism
- Enhances crop yield and quality
- Helps correct zinc deficiency symptoms
- Improves soil microbial activity and fertility
- Supports sustainable and balanced nutrition

30.iGreen Si

Target Crops

- **Field Crops:** Rice, Wheat, Maize, Cotton
- **Vegetables:** Tomato, Chilli, Onion, Potato
- **Fruits:** Mango, Banana, Grapes, Citrus

- **Plantation Crops:** Tea, Coffee, Sugarcane
- **Others:** Pulses, Oilseeds, Floriculture crops

Key Benefits

- Solubilizes **fixed zinc in soil** and makes it plant-available
- Enhances **micronutrient uptake (especially Zn)**
- Promotes **root growth and plant vigor**
- Improves **enzyme activity and plant metabolism**
- Enhances **crop yield and quality**
- Helps correct **zinc deficiency symptoms**
- Improves **soil microbial activity and fertility**
- Supports **sustainable and balanced nutrition**

31.iGreen™ Zn

Target Crops

- Field Crops: Rice, Wheat, Maize, Cotton
- Vegetables: Tomato, Chilli, Onion, Potato
- Fruits: Mango, Banana, Grapes, Citrus
- Plantation Crops: Tea, Coffee, Sugarcane
- Others: Pulses, Oilseeds, Floriculture crops

Key Benefits

- Solubilizes insoluble phosphorus in soil
- Enhances nutrient uptake efficiency
- Promotes root growth and plant vigor
- Improves soil microbial activity and fertility
- Produces growth-promoting substances (IAA, enzymes)
- Enhances plant resistance to stress conditions
- Improves crop yield and quality
- Reduces dependency on chemical fertilizers

Microbial Pesticides

32.Biota H

Target Crops

- Field Crops: Rice, Wheat, Maize, Cotton
- Vegetables: Tomato, Chilli, Brinjal, Onion
- Fruits: Banana, Grapes, Citrus, Mango
- Plantation Crops: Tea, Coffee, Sugarcane
- Others: Pulses, Oilseeds, Floriculture, Nursery crops

Target Disease (Important – not pest)

- Effective against soil-borne fungal diseases:
- Damping-off
- Root rot
- Wilt (Fusarium, Rhizoctonia, etc.)
- Collar rot
- Seedling blight

Key Benefits

- Acts as a biological fungicide against soil pathogens
- Promotes root growth and plant vigor
- Improves nutrient uptake and soil health
- Produces antifungal metabolites
- Competes with and suppresses harmful fungi
- Enhances plant resistance to diseases
- Suitable for organic farming and IPM programs
- Improves crop yield and survival rate

33.Biota V

Target Crops

- **Field Crops:** Rice, Wheat, Maize, Cotton
- **Vegetables:** Tomato, Chilli, Brinjal, Onion
- **Fruits:** Banana, Grapes, Citrus, Mango

- **Plantation Crops:** Tea, Coffee, Sugarcane
- **Others:** Pulses, Oilseeds, Floriculture, Nursery crops

Target Disease

Effective against soil-borne fungal diseases:

- Damping-off
- Root rot
- Wilt (Fusarium, Rhizoctonia, etc.)
- Collar rot
- Seedling blight

Key Benefits

- Acts as a biological fungicide against soil pathogens
- Produces antifungal compounds to suppress harmful fungi
- Enhances root growth and plant vigor
- Improves nutrient uptake and soil health
- Competes with pathogenic fungi in the rhizosphere
- Enhances plant resistance to diseases
- Suitable for organic farming and IPM programs
- Improves crop yield and survival rate

34.Elixora™

Target Crops

- Field Crops: Rice, Wheat, Maize, Cotton
- Vegetables: Tomato, Chilli, Brinjal, Onion
- Fruits: Banana, Grapes, Citrus, Mango
- Plantation Crops: Tea, Coffee, Sugarcane
- Others: Pulses, Oilseeds, Floriculture, Nursery crops

Target Disease

Effective against fungal and bacterial plant diseases:

- Root rot
- Wilt diseases
- Damping-off
- Leaf spot (early stage)
- Blight (early stage)

Key Benefits

- Acts as a biological control agent (biofungicide)
- Produces antimicrobial compounds (lipopeptides, enzymes)
- Promotes root growth and plant vigor (PGPR effect)
- Enhances nutrient uptake efficiency
- Suppresses soil-borne and foliar pathogens
- Improves plant immunity and stress tolerance
- Suitable for organic farming and IPM programs
- Improves crop yield and quality

35.Encilo

Target Crops

- Field Crops: Rice, Wheat, Maize, Cotton
- Vegetables: Tomato, Chilli, Brinjal, Okra
- Fruits: Banana, Grapes, Citrus
- Plantation Crops: Tea, Coffee, Sugarcane
- Others: Pulses, Oilseeds, Floriculture, Nursery crops

Target Pest (Nematodes)

Effective against plant parasitic nematodes:

- Root-knot nematodes (*Meloidogyne* spp.)
- Cyst nematodes
- Lesion nematodes (*Pratylenchus* spp.)
- Burrowing nematodes

Key Benefits

- Acts as a biological nematicide
- Parasitizes and destroys nematode eggs and juveniles
- Reduces nematode population in soil
- Promotes healthy root system development

- Improves nutrient and water uptake
- Enhances plant growth and yield
- Safe for organic farming and IPM programs
- Improves soil microbial balance

36. Mycova

Target Crops

- **Field Crops:** Rice, Cotton, Maize, Pulses
- **Vegetables:** Tomato, Chilli, Brinjal, Okra, Cabbage
- **Fruits:** Mango, Banana, Grapes, Citrus
- **Plantation Crops:** Tea, Coffee, Sugarcane
- **Others:** Floriculture, Nursery, and horticultural crops

Target Pest

Effective against a wide range of insect pests:

- Aphids
- Whiteflies
- Thrips
- Mealybugs
- Termites
- Beetles
- Caterpillars (early stages)

Key Benefits

- Acts as a biological insecticide (entomopathogenic fungus)
- Infects and kills insects through cuticle penetration
- Provides broad-spectrum pest control
- Safe for beneficial insects (when used correctly)
- Suitable for organic farming and IPM programs
- Leaves no harmful residues
- Helps in resistance management
- Improves sustainable crop protection

37. Neuvita

Target Crops

- Field Crops: Rice, Wheat, Maize, Cotton
- Vegetables: Tomato, Chilli, Brinjal, Onion
- Fruits: Banana, Grapes, Citrus, Mango
- Plantation Crops: Tea, Coffee, Sugarcane
- Others: Pulses, Oilseeds, Floriculture, Nursery crops

Target Disease

Effective against fungal and bacterial plant diseases:

- Damping-off
- Root rot
- Wilt diseases
- Leaf spot
- Blight (early stage)

Key Benefits

- Acts as a biological control agent (biofungicide)
- Produces antibiotics and siderophores to suppress pathogens
- Promotes root growth and plant vigor (PGPR effect)
- Enhances nutrient uptake and soil health
- Induces systemic resistance (ISR) in plants
- Reduces dependency on chemical fungicides
- Suitable for organic farming and IPM programs
- Improves crop yield and quality

TARGET PATHOGENS

Effective against a broad spectrum of plant pathogenic fungi and bacteria:

- *Fusarium* spp. (Wilt diseases)
- *Rhizoctonia solani* (Root rot, damping-off)
- *Pythium* spp. (Damping-off)
- *Phytophthora* spp. (Root rot, blight)
- *Sclerotium rolfsii* (Collar rot)
- *Alternaria* spp. (Leaf spot)
- *Xanthomonas* spp. (Bacterial leaf spot)
- *Pseudomonas syringae* (Bacterial blight)

38.Rexora

Target Crops

- **Field Crops:** Rice, Cotton, Maize, Pulses
- **Vegetables:** Tomato, Chilli, Brinjal, Okra
- **Fruits:** Mango, Banana, Grapes, Citrus
- **Plantation Crops:** Tea, Coffee, Sugarcane
- **Others:** Floriculture, Nursery, and horticultural crops

Target Insect Pests

- Termites
- White grubs
- Root grubs
- Cutworms
- Stem borers (early stage)
- Weevils
- Grasshoppers / locusts

Key Benefits

- Acts as a biological insecticide (entomopathogenic fungus)
- Infects insects through cuticle penetration and sporulation
- Highly effective against soil-dwelling pests
- Provides long-lasting pest suppression in soil
- Safe for beneficial organisms when used correctly
- Suitable for organic farming and IPM programs
- Reduces dependency on chemical insecticides
- Improves crop health and yield

39.Seira

Target Crops

- Field Crops: Rice, Cotton, Maize, Pulses
- Vegetables: Tomato, Chilli, Brinjal, Okra, Cabbage
- Fruits: Mango, Banana, Grapes, Citrus
- Plantation Crops: Tea, Coffee
- Others: Floriculture, Greenhouse, Nursery crops

Target Insect Pests

Effective against sucking pests:

- Aphids
- Whiteflies
- Thrips
- Mealybugs
- Scale insects

Key Benefits

- Acts as a biological insecticide (entomopathogenic fungus)
- Highly effective against sucking insect pests
- Infects insects through cuticle penetration and colonization
- Provides eco-friendly pest control
- Suitable for organic farming and IPM programs
- Leaves no harmful residues
- Helps in resistance management
- Improves crop protection and quality

40.Subtilix

Target Crops

- Field Crops: Rice, Wheat, Maize, Cotton
- Vegetables: Tomato, Chilli, Brinjal, Onion
- Fruits: Banana, Grapes, Citrus, Mango
- Plantation Crops: Tea, Coffee, Sugarcane
- Others: Pulses, Oilseeds, Floriculture, Nursery crops

Target Pathogens

- Fusarium spp.
- Rhizoctonia solani
- Pythium spp.
- Phytophthora spp.
- Alternaria spp.
- Sclerotium rolfsii

Key Benefits

- Acts as a biological control agent (biofungicide)
- Produces antibiotics and enzymes to suppress pathogens
- Promotes root growth and plant vigor (PGPR effect)
- Enhances nutrient uptake efficiency

- Improves soil microbial balance and fertility
- Induces systemic resistance in plants (ISR)
- Reduces dependency on chemical fungicides
- Improves crop yield and quality
