

KRIYA BIOSYS · SCIENCE PLATFORM

Kriya Technology Stack

Three specialized platforms. One integrated biological innovation system.

Wynn™ · Karyo™ · Microvate™

FOUNDATION

Why a Technology Stack

The Science Behind Performance

Biological product performance depends not only on the active ingredient, but on how biological systems are discovered, engineered, protected, delivered, and activated.

- Wynn™ — builds microbial systems
- Karyo™ — protects and delivers actives
- Microvate™ — activates biological readiness

Pest Infestation

Soil Degradation

Excessive Chemical Use

Climate Stress & Crop Damage

ARCHITECTURE

The Three Platforms

Each platform contributes a unique and distinct role within Kriya's integrated biological innovation system.

- Wynn™ — microbial science & process platform
- Karyo™ — active delivery & protection platform
- Microvate™ — precision biological activation

— PROCESS FLOW

How the Stack Works

Sequential, Integrated Roles

Each platform plays a distinct, sequential role — together forming a complete biological innovation system from discovery to field activation.

- Wynn develops microbial systems
- Karyo protects and stabilizes actives
- Microvate activates biological readiness at use

PLATFORM 01 · Wynn™

PLATFORM 01

Wynn™

Microbial Performance Engine

A microbial platform built for scale, stability, and agronomic relevance — from discovery through to validated field performance.

- Microbial discovery
- Bioactivity analytics
- Bioprocess engineering
- Stability science
- Field validation

PLATFORM ARCHITECTURE

Wynn™ Six-Pillar Architecture

01
Microbial Intelligence

02
Bioactivity Analytics

03
Bioprocess Engineering

04
Biomass & Metabolite Recovery

05
Stability Science

06
Validation & Translation

PLATFORM 02 · Microvate™

PLATFORM 02

Microvate™

Precision Activation Platform

Precision activation for microbial systems designed to remain protected during storage and become functionally ready only at the point of use.

- Just-in-time activation
- Dual-component packaging
- Extended shelf life
- Cross-species synergy
- Consistent quality delivery

PLATFORM DETAIL

Microvate™ — Dual-Component Technology

01
Separated Stability
Architecture

02
Protected Storage
Logic

03
Point-of-Use
Activation

04
Readiness Control

05
Engineered Synergy

06
Application-Phase
Performance

PLATFORM 03 · Karyo™

PLATFORM 03

Karyo™

Delivery & Protection Platform

A next-generation delivery and protection platform for microbial and botanical actives — scalable, sustainable, and science-driven.

- Export-ready formulations
- Enhanced bioavailability
- Global stability
- Scalable fermentation
- Consistent CFU delivery

PLATFORM ARCHITECTURE

Microvate™ Six-Pillar Architecture

01
Separated Stability
Arch.

02
Protected Storage
Logic

03
Point-of-Use
Activation

04
Readiness Control

05
Engineered Synergy

06
Application-Phase
Performance

SUMMARY

Role of Each Platform

Wynn™

Microbial Science & Process

- Builds microbial systems
- Bioprocess engineering
- Field validation
- Stability science

Karyo™

Delivery & Protection

- Active protection
- Encapsulation systems
- Multi-active integration
- Format flexibility

Microvate™

Precision Activation

- Just-in-time activation
- Dual-component packaging
- Extended shelf life
- Consistent quality

— VALUE PROPOSITION

Why It Matters

01

Explains Biological Performance

Shows how performance is systematically engineered across every stage of product development — from discovery to the field.

02

Strengthens Scientific Credibility

A structured, documented platform architecture builds trust with scientists, agronomists, and regulatory bodies.

03

Clear Innovation Architecture

Creates a transparent framework for understanding how each platform integrates with the others.

04

Supports Key Stakeholders

Equips distributors, agronomists, and regulatory bodies with the clarity they need to make informed decisions.
